PROFESSIONAL SUMMARY

Early-career cybersecurity professional with an Associate of Science in Cybersecurity conferring September 1, 2026, a 3.97 GPA, and hands-on security operations experience developed through a Wazuh SIEM home lab and portfolio projects. Experienced in log analysis, alert investigation, threat identification, vulnerability assessment, incident-response documentation, and technical troubleshooting. Brings nearly 20 years of safety-focused industrial experience, clear written communication, and disciplined problem solving to a Junior SOC Analyst, Security Operations Analyst, or Cybersecurity Analyst role.

SECURITY OPERATIONS SKILLS

Security Operations: SIEM monitoring, log analysis, alert triage, incident investigation, threat and anomaly identification, MITRE ATT&CK mapping

Security Tools: Wazuh SIEM, OpenVAS, Wireshark, Nmap, Metasploit, Kali Linux

Systems & Networking: Ubuntu Server, Windows Server 2019, Windows 10/11, Active Directory, TCP/IP, DNS, DHCP, network troubleshooting

Security Practices: Vulnerability management, endpoint-security fundamentals, incident response, access control, security documentation, NIST concepts

CYBERSECURITY PROJECTS

Security Operations & Incident Response Lab | Independent Home Lab | 2026

- Deployed and administered Wazuh Manager on Ubuntu with Linux and Kali agents in an isolated VirtualBox environment.
- Analyzed authentication, privilege-escalation, account-change, and network activity to distinguish expected behavior from suspicious events.
- Investigated alerts, reconstructed timelines, identified indicators, mapped activity to MITRE ATT&CK, and documented containment and remediation actions.
- Produced polished SOC-style incident reports designed for both technical and non-technical readers and published selected work in a cybersecurity portfolio.

Vulnerability Assessment & Remediation | Academic and Independent Labs | 2025-2026

- Performed OpenVAS assessments against Windows and Linux systems; reviewed severity, validated findings, and prioritized remediation recommendations.
- Conducted Nmap reconnaissance and controlled Metasploitable 2 validation to connect exploitable services with risk, mitigation, and detection opportunities.

Network Traffic & Systems Administration | Academic Labs | 2024-2026

- Captured and analyzed traffic with Wireshark to investigate authentication activity, protocols, and suspicious network behavior.
- Administered Windows Server 2019 and Active Directory labs, including users, groups, permissions, DNS, DHCP, and network configuration.

EDUCATION

Southern New Hampshire University | Associate of Science in Cybersecurity

Conferral date: September 1, 2026 | GPA: 3.97 | Honor Roll, 2023-2026

Alpha Sigma Lambda Honor Society | National Society of Leadership and Success

PROFESSIONAL EXPERIENCE

Aggregate Maintenance Technician | Midwest Concrete Materials | July 2024-Present

- Troubleshoot mechanical and electrical systems, diagnose failures, document work, and restore reliable operation in a fast-paced industrial environment.
- Prioritize safety-critical issues, coordinate with coworkers, and communicate findings clearly during maintenance and operational response.

Millwright | R&S Maintenance | May 2023-June 2024

- Performed maintenance, installation, root-cause troubleshooting, and technical problem solving across multiple industrial facilities.

Corrections Officer | Pottawatomie County Sheriff's Office | 2009-2011

- Maintained security, accountability, detailed documentation, and calm decision-making in a controlled, high-responsibility environment.

Welder III | Caterpillar | 2007-2009

- Manufactured heavy-equipment components, trained employees, followed controlled procedures, and supported process improvements.
